

# Upper Onny Wildlife Group Lapwing Records 2015

Records from all surveys (March – June 2015)

The two pairs in SO39Z were found at the end of May, but only one was seen there during the earlier surveys. A pair may have relocated from SO39Y, or elsewhere. The two pairs in SO39Y had gone by early May, and were probably the ones in SO39T on 27 April

The two pairs in SO39K left after the fields were ploughed, perhaps one to the easterly site in the same square, and the other to SO39I

The pairs in SO39F, L, P, V and Z were still present, with chicks, during the third survey. A chick apparently fledged in SO39L, other outcomes unknown

Total 13 – 17 pairs.
