

Upper Onny Wildlife Group Cuckoo Records 2023

(All surveys and Casual records)

Each dot represents a calling (male) seen or heard on one of the surveys. Breeding territories are large, so some dots will be the same bird.

- First survey (up to 9 April)
- Second survey (up to 7 May)
- Third survey (up to 18 June)

Casual records (birds seen or heard, but not during a survey) are shown as hatched dots in the appropriate period colour.

Population estimate: 5 – 7 territorial males, compared with 5 in 2022
