Clee Hill Community Wildlife Group

Area covers 20 2x2 kilometre squares, known as “tetrads”.

Kestrel 2024

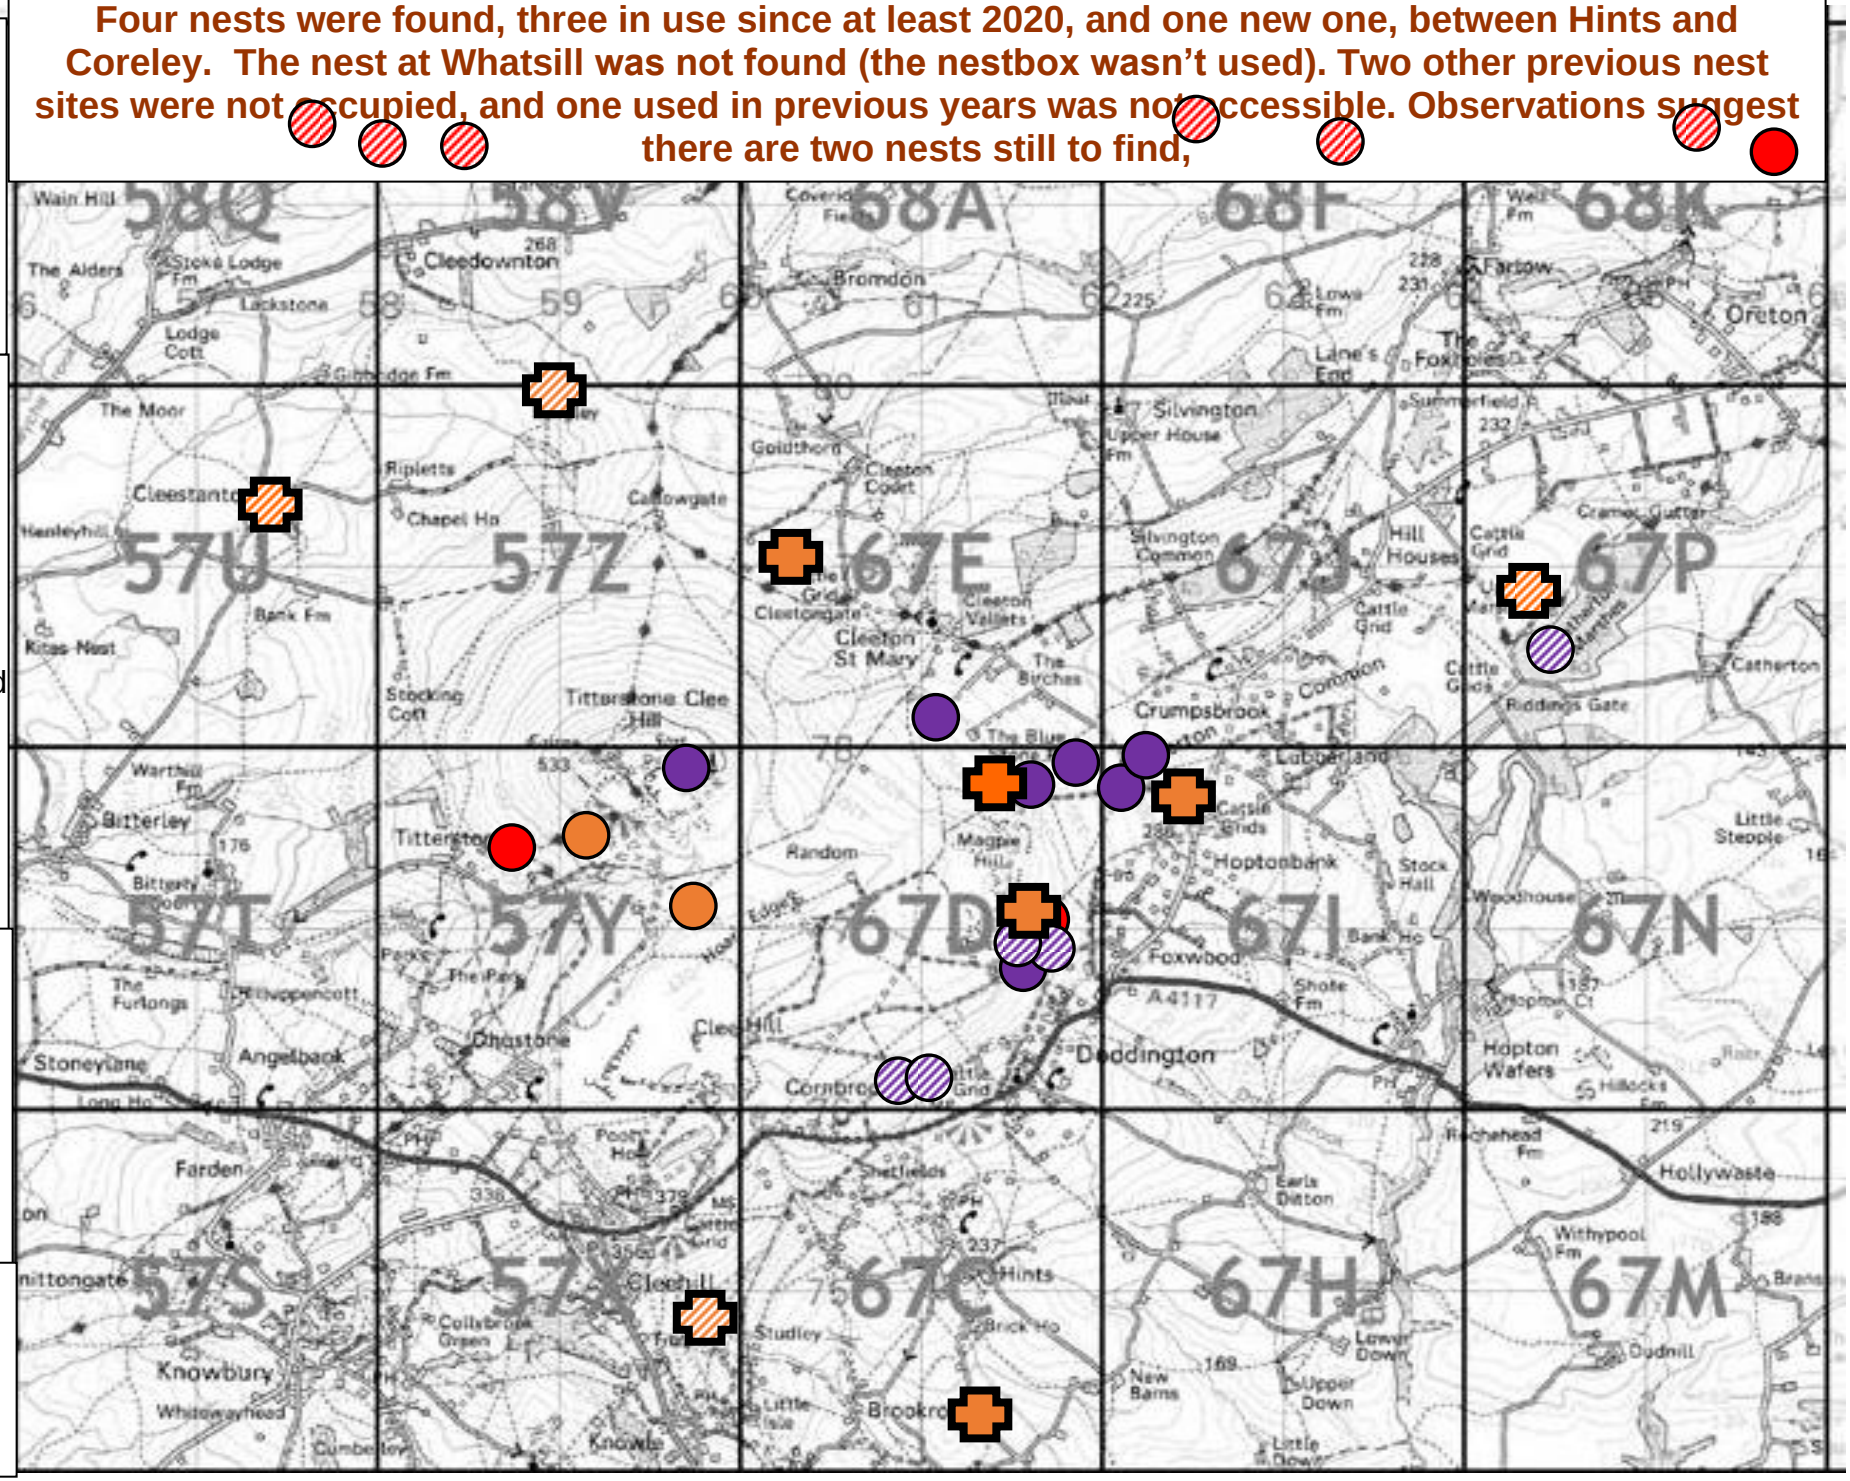
Sightings during

- First period (up to 9 April)
- Second period (up to 7 May)
- Third period (up to 18 June)

Nest sites

- Nest site 2024
- Nest site (previous years)

Other Casual Records use the colour for the survey period, with hatching

Estimated population in survey area: 7 - 9 pairs


Four nests were found, three in use since at least 2020, and one new one, between Hints and Coreley. The nest at Whatsill was not found (the nestbox wasn’t used). Two other previous nest sites were not occupied, and one used in previous years was not accessible. Observations suggest there are two nests still to find,
